Streamflow Aptos Audit Report

1 Executive Summary

1.1 Project Information

Description	A crypto asset streaming protocol.
Туре	DeFi
Auditors	MoveBit
Timeline	Wed Mar 06 2024 - Fri Mar 08 2024
Languages	Move
Platform	Aptos
Methods	Architecture Review, Unit Testing, Manual Review
Source Code	https://github.com/streamflow-finance/aptos-streamflow-module
Commits	e10006ae3e7929625f7e8b21ac7e6671461f87df 7e16e45b0c812641e6176ad6c8996a9a574b0a60

1.2 Files in Scope

The following are the SHA1 hashes of the original reviewed files.

	sources/test_utils.move sources/strmt.move	2bd0a3cfdab296f0cb7dba28d7f13 e2d04cecd1a

1.3 Issue Statistic

ltem	Count	Fixed	Acknowledged
Total	7	4	3
Informational	1	1	0
Minor	5	3	2
Medium	1	0	1
Major	0	0	0
Critical	0	0	0

1.4 MoveBit Audit Breakdown

MoveBit aims to assess repositories for security-related issues, code quality, and compliance with specifications and best practices. Possible issues our team looked for included (but are not limited to):

- Transaction-ordering dependence
- Timestamp dependence
- Integer overflow/underflow by bit operations
- Number of rounding errors
- Denial of service / logical oversights
- Access control
- Centralization of power
- Business logic contradicting the specification
- Code clones, functionality duplication
- Gas usage
- Arbitrary token minting
- Unchecked CALL Return Values
- The flow of capability
- Witness Type

1.5 Methodology

The security team adopted the "Testing and Automated Analysis", "Code Review" and "Formal Verification" strategy to perform a complete security test on the code in a way that is closest to the real attack. The main entrance and scope of security testing are stated in the conventions in the "Audit Objective", which can expand to contexts beyond the scope according to the actual testing needs. The main types of this security audit include:

(1) Testing and Automated Analysis

Items to check: state consistency / failure rollback / unit testing / value overflows / parameter verification / unhandled errors / boundary checking / coding specifications.

(2) Code Review

The code scope is illustrated in section 1.2.

(3) Formal Verification

Perform formal verification for key functions with the Move Prover.

(4) Audit Process

- Carry out relevant security tests on the testnet or the mainnet;
- If there are any questions during the audit process, communicate with the code owner
 in time. The code owners should actively cooperate (this might include providing the
 latest stable source code, relevant deployment scripts or methods, transaction
 signature scripts, exchange docking schemes, etc.);
- The necessary information during the audit process will be well documented for both the audit team and the code owner in a timely manner.

2 Summary

This report has been commissioned by Streamflow to identify any potential issues and vulnerabilities in the source code of the Streamflow Aptos smart contract, as well as any contract dependencies that were not part of an officially recognized library. In this audit, we have utilized various techniques, including manual code review and static analysis, to identify potential vulnerabilities and security issues.

During the audit, we identified 7 issues of varying severity, listed below.

ID	Title	Severity	Status
ADM-1	Missing Events For Important Parameter Updates	Minor	Fixed
ADM-2	Lack of #[test] Attribute	Minor	Acknowledged
PRO-1	pausable and current_pause_start Parameters cannot be Modified	Medium	Acknowledged
PRO-2	Unused Constants Should Be Removed	Minor	Fixed
PRO-3	Unused Event Should Be Removed	Minor	Fixed
PRO-4	Deprecated Function can Still be Used	Minor	Acknowledged
PRO-5	Unnecessary create_signer_with_capability	Informational	Fixed

3 Participant Process

Here are the relevant actors with their respective abilities within the Streamflow Aptos Smart Contract :

Admin

- Admin can update the streamflow_fee and tx_fee through change_tx_fee and change_streamflow_fee.
- Admin can update the treasury address through change_treasury.
- Admin can add a FeeValue to Fee_Table through fees_write.

User

- User can create a Contract through create.
- User can update the information of Contract through update.
- User can get the Contract coin through withdraw.
- User can cancel the Contract and withdraw the left coin through cancel.
- User can extend the Contract time through topup.
- User can pause and unpause the Contract through pause and unpause.

4 Findings

ADM-1 Missing Events For Important Parameter Updates

Severity: Minor

Status: Fixed

Code Location:

sources/admin.move#60,70,80,90,100;

sources/fees.move#30,37

Descriptions:

We found that when important parameters are updated in the project, the function doesn't emit the update event, so we suggest emitting the emit event in time so as to notify the user or chain off programs.

Suggestion:

It is recommended to emit the corresponding event in time when updating the important parameter.

Resolution:

The client has added events for key actions.

ADM-2 Lack of #[test] Attribute

Severity: Minor

Status: Acknowledged

Code Location:

sources/admin.move#36

Descriptions:

The init_module_test function is missing the test #[test] attribute tags, missing them would cause the function to be compiled into the program and, since the permissions are public, any user can call the function.

Suggestion:

It is suggested to add #[test] attribute tag to the init_module_test function.

Resolution:

The client already knows that this issue does not pose a security risk.

PRO-1 pausable and current_pause_start Parameters cannot be Modified

Severity: Medium

Status: Acknowledged

Code Location:

sources/protocol.move#48

Descriptions:

In the create function we can initialize the pausable and current_pause_start parameters, but the validate_contract_params function requires that the determined pausable parameter must be false, and there is no way to modify pausable and current_pause_start anywhere else. In addition, there is no specific implementation of the pause method in the contract.

Suggestion:

It is recommended to confirm whether this is in line with the design concept.

Resolution:

The client says that the current user interface does not utilize this functionality and there are no plans to do so at this time.

PRO-2 Unused Constants Should Be Removed

Severity: Minor

Status: Fixed

Code Location:

sources/protocol.move#27

Descriptions:

There are unused constants that may be removed.

// protocol.move
const EBAD_INPUT_UPDATE_RATE: u64 = 8;

Suggestion:

It is recommended to remove those constants if not used, or keep them but comment them out for future use.

Resolution:

The client has removed unused variables.

PRO-3 Unused Event Should Be Removed

Severity: Minor

Status: Fixed

Code Location:

sources/protocol.move#282-284

Descriptions:

There are unused events that may be removed, such as EscrowlnitEvent .

Suggestion:

It is recommended to remove that event if not used, or keep them but comment them out for future use.

Resolution:

The client has removed unused events.

PRO-4 Deprecated Function can Still be Used

Severity: Minor

Status: Acknowledged

Code Location:

sources/protocol.move#497-525

Descriptions:

The comments of the collect_fees function indicate that this function has been deprecated and should not be used, but the function can still be called normally, which may cause unnecessary losses.

Suggestion:

It is recommended to delete or comment out this function.

Resolution:

The client says this is a backward incompatible change and will not result in a financial loss.

PRO-5 Unnecessary create_signer_with_capability

Severity: Informational

Status: Fixed

Code Location:

sources/protocol.move#606

Descriptions:

For the coin::transfer function, the recipient parameter does not need a singer, so in the topup function, Contract's contract_signer is not needed when transferring the coin to Contract, and the contract_address is used directly.

Suggestion:

It is recommended to just use contract_address .

Resolution:

The client has taken our suggestions to optimize the code.

Appendix 1

Issue Level

- **Informational** issues are often recommendations to improve the style of the code or to optimize code that does not affect the overall functionality.
- **Minor** issues are general suggestions relevant to best practices and readability. They don't post any direct risk. Developers are encouraged to fix them.
- **Medium** issues are non-exploitable problems and not security vulnerabilities. They should be fixed unless there is a specific reason not to.
- **Major** issues are security vulnerabilities. They put a portion of users' sensitive information at risk, and often are not directly exploitable. All major issues should be fixed.
- **Critical** issues are directly exploitable security vulnerabilities. They put users' sensitive information at risk. All critical issues should be fixed.

Issue Status

- **Fixed:** The issue has been resolved.
- Partially Fixed: The issue has been partially resolved.
- Acknowledged: The issue has been acknowledged by the code owner, and the code owner confirms it's as designed, and decides to keep it.

Appendix 2

Disclaimer

This report is based on the scope of materials and documents provided, with a limited review at the time provided. Results may not be complete and do not include all vulnerabilities. The review and this report are provided on an as-is, where-is, and as-available basis. You agree that your access and/or use, including but not limited to any associated services, products, protocols, platforms, content, and materials, will be at your own risk. A report does not imply an endorsement of any particular project or team, nor does it guarantee its security. These reports should not be relied upon in any way by any third party, including for the purpose of making any decision to buy or sell products, services, or any other assets.
